# Google Ads & Performance Max Playbook

## Search Intent Architecture, Negative Keyword Stacks, and PMax Asset Groups

THE GROWTH ARCHIVE | FIELD KNOWLEDGE EDITION 2026

CONFIDENTIAL & PROPRIETARY | LICENSED FOR SINGLE-OPERATOR USE

## EXECUTIVE BRIEFING & METHODOLOGY

This digital resource synthesizes production experiments, campaign architecture,
and battle-tested systems deployed across high-scale performance marketing campaigns.
Every framework included here was verified against measurable CAC, ROAS, and retention.

### CORE OBJECTIVES

1. Eliminate guesswork from campaign setup and scale with deterministic rules.
2. Optimize unit economics, attribution models, and conversion rates.
3. Execute standard operating procedures without relying on fragile hacks.

# PART 1: SEARCH CAMPAIGN STRUCTURING

Segregate high-intent transactional search terms from informational queries.

Utilize exact match and phrase match alongside extensive account-level negative lists.

Implement Value-Based Bidding (tROAS) once conversion volume exceeds 30/month.

Craft responsive search ads with distinct headline variations: brand, feature, benefit, CTA.

Audit search term reports bi-weekly to uncover negative keyword candidates.

# PART 2: PERFORMANCE MAX SCALING & ASSET MASTERY

Feed high-quality first-party customer audience signals into PMax asset groups.

Exclude existing customer brand searches using brand exclusion lists to avoid cannibalization.

Provide high-resolution image assets across landscape, square, and portrait ratios.

Monitor placement reports to prune low-quality display network and mobile game placements.

Scale budgets gradually during seasonal peaks while monitoring search impression share.
