Scaling D2C to 50L/mo: Field Experiments & Post-Mo

What Worked, What Burned Budget, and Exact Campaign Iterations

EXECUTIVE BRIEFING & METHODOLOGY

This digital resource synthesizes production experiments, campaign architecture,
and battle-tested systems deployed across high-scale performance marketing campaigns.
Every framework included here was verified against measurable CAC, ROAS, and retention.

CORE OBJECTIVES

1. Eliminate guesswork from campaign setup and scale with deterministic rules.
2. Optimize unit economics, attribution models, and conversion rates.
3. Execute standard operating procedures without relying on fragile hacks.

CASE STUDY: 12 MONTHS OF CONTINUOUS EXPERIMENTS

Experiment 1 (Landing Page Redesign): Removing navigation bar lifted checkout rate by 22.4%.

Experiment 2 (Offer Bundling): Introducing a 3-item tier increased AOV from Rs 850 to Rs 1,420.

Experiment 3 (Failed Advantage+ Campaign): Broad lookalikes cannibalized existing search traffic.

Experiment 4 (Founder Video Ads): Raw, unedited phone footage delivered 41% lower CPA than studio ads.

Experiment 5 (Post-Purchase One-Click Upsell): Added Rs 3.8L net profit with zero ad spend.

KEY LESSONS & REPRODUCIBLE FRAMEWORKS

Never scale ad budget more than 20% every 48 hours to preserve algorithmic stability.

Creative fatigue arrives faster than audience saturation: Refresh hooks weekly.

Attribution lag: Customers often take 4 to 11 days to convert after initial touchpoint.

Track first-party conversions using CAPI (Conversions API) to bridge Safari tracking gaps.

A solid product with high reorder rate beats any ad hack every single time.
