EXECUTIVE BRIEFING & METHODOLOGY

This digital resource synthesizes production experiments, campaign architecture, and battle-tested systems deployed across high-scale performance marketing campaigns. Every framework included here was verified against measurable CAC, ROAS, and retention.

CORE OBJECTIVES

1. Eliminate guesswork from campaign setup and scale with deterministic rules.
2. Optimize unit economics, attribution models, and conversion rates.
3. Execute standard operating procedures without relying on fragile hacks.

SECTION 1: THE CONSOLIDATED CAMPAIGN MODEL

Modern Meta bidding algorithms require maximum liquidity and minimal ad set fragmentation.

Broad targeting paired with creative-level demographic segregation outperforms micro-audiences.

Implement a 3-tier structure: Sandbox (testing), Scaling (proven winners), and Retention (LTV).

Set bid caps strategically only when scaling spend exceeds 3x target daily budget.

Creative diversity is the real targeting lever: static hooks, UGC problem-aware, and comparison charts.

SECTION 2: CREATIVE TESTING PROTOCOL & METRICS

Rule 1: Never edit a winning ad set; spawn duplicates with updated dynamic creative pools.

Rule 2: Measure thumb-stop ratio (3-second views / impressions) target > 35%.

Rule 3: Measure outbound click-through-rate (CTR) target > 1.8% for cold traffic.

Rule 4: Kill losers at 1.5x target CPA if outbound ROAS is below break-even threshold.

Audit cadence: Weekly budget reallocation based on 7-day trailing blended CAC.
