SEO Master Notes: Information Architecture & Rankin

Comprehensive Reference Notes on Crawl Budgets, Semantic Entities & Topic Clusters

THE GROWTH ARCHIVE | FIELD KNOWLEDGE EDITION 2026

CONFIDENTIAL & PROPRIETARY | LICENSED FOR SINGLE-OPERATOR USE

EXECUTIVE BRIEFING & METHODOLOGY

This digital resource synthesizes production experiments, campaign architecture,
and battle-tested systems deployed across high-scale performance marketing campaigns.
Every framework included here was verified against measurable CAC, ROAS, and retention.

CORE OBJECTIVES

1. Eliminate guesswork from campaign setup and scale with deterministic rules.
2. Optimize unit economics, attribution models, and conversion rates.
3. Execute standard operating procedures without relying on fragile hacks.

CHAPTER 1: SEMANTIC ENTITY MAPPING

Search engines rank topical authority clusters, not isolated keyword matches.

Structure your information architecture using pillar pages linked to tightly focused satellite articles.

Include schema.org structured data (Article, FAQPage, BreadcrumbList) on every URL.

Internal anchor text must be descriptive and varied; avoid generic click-here anchors.

Prioritize natural language entity co-occurrence in headers (H2, H3) and opening paragraphs.

CHAPTER 2: TECHNICAL CRAWLABILITY & CWV CHECKLIST

Ensure server response time (TTFB) is below 300ms across all cached endpoints.

Eliminate redirect chains and clean orphan URLs using periodic XML sitemap audits.

Target Largest Contentful Paint (LCP) < 2.0s, Cumulative Layout Shift (CLS) < 0.05.

Utilize canonical tags strictly on duplicate and paginated parameter variations.

Monitor Google Search Console Index Coverage weekly for soft 404s and noindex leaks.
